Art Unit: 1713

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-15, drawn to a copolymer, classified in class 526, subclass 348.

II. Claims 16-22, drawn to a lubricant composition, classified in class 524, subclass

*5*70.

III. Claims 23-29, drawn to a method of improving viscosity of a lubricant, classified

in class 524, subclass 570.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as mutually exclusive species in an intermediate-final

product relationship. Distinctness is proven for claims in this relationship if the intermediate

product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and

the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate

product is deemed to be useful as a impact modifier, and the inventions are deemed patentably

distinct since there is nothing on this record to show them to be obvious variants. Should

applicant traverse on the ground that the species are not patentably distinct, applicant should

submit evidence or identify such evidence now of record showing the species to be obvious

variants or clearly admit on the record that this is the case. In either instance, if the examiner

finds one of the inventions anticipated by the prior art, the evidence or admission may be used in

a rejection under 35 U.S.C. 103(a) of the other invention.

Page 2

Art Unit: 1713

3. Inventions I and III are related as product and process of use. The inventions can be

shown to be distinct if either or both of the following can be shown: (1) the process for using the

product as claimed can be practiced with another materially different product or (2) the product

as claimed can be used in a materially different process of using that product (MPEP

§ 806.05(h)). In the instant case, the product as claimed can be used in a materially different

process of using that product such as a process for modifying impact strength of a condensation

polymer.

4. Inventions III and II are related as process of making and product made. The inventions

are distinct if either or both of the following can be shown: (1) that the process as claimed can be

used to make other and materially different product or (2) that the product as claimed can be

made by another and materially different process (MPEP § 806.05(f)). The process as claimed

can be used to make a materially different product such as a plasticized polymer.

5. Because these inventions are distinct for the reasons given above and have acquired a

separate status in the art as shown by their different classification, restriction for examination

purposes as indicated is proper.

6. Because these inventions are distinct for the reasons given above and the search required

for Group I is not required for Group II or III, restriction for examination purposes as indicated is

proper.

Page 3

Art Unit: 1713

7. Because these inventions are distinct for the reasons given above and the search required

for Group II is not required for Group III, restriction for examination purposes as indicated is

proper.

8. Because these inventions are distinct for the reasons given above and have acquired a

separate status in the art because of their recognized divergent subject matter, restriction for

examination purposes as indicated is proper.

9. A telephone call was made to Daniel E. Reitenbach on February 28, 2005 to request an

oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an

election of the invention to be examined even though the requirement be traversed (37 CFR

1.143).

10. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the

inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the

currently named inventors is no longer an inventor of at least one claim remaining in the

application. Any amendment of inventorship must be accompanied by a request under 37 CFR

1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rip A. Lee whose telephone number is (571)272-1104. The examiner can be reached on Monday through Friday from 9:00 AM - 5:00 PM. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Wu, can be reached at (571)272-1114. The fax phone number for the organization where this application or proceeding is assigned is (703)872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on the access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll free).
